

RUSHIKESH YASHWANT JADHAV

Chicago, IL | (507) 581-4046 | rushikesh.y.jadhav@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

TECHNICAL SKILLS

Languages & Tools: Python, R, SAS, Stata, SQL, RSQLite, Ruby, JavaScript (D3.js), HTML, CSS, Excel, Pandas, NumPy, Rasterio, GeoPandas, Shapely, Matplotlib, ArcGIS Pro
Statistical & Analytical Methods: RCT Analysis, Regression Analysis, Difference-in-Differences, Synthetic Control, Propensity Score Matching, Instrumental Variables, Machine Learning, Time Series, Panel Data, Financial Modeling, Cost-Benefit Analysis
Data Engineering & Visualization: ETL Pipeline Construction, Interactive Dashboards (D3.js), Geospatial & Raster Analysis, Large-Scale Administrative Data Processing
Full-Stack Development: Ruby on Rails, Supabase, Render, OpenAI API, Google Maps API
Platforms: GitHub, VSCode, Sublime, RStudio, LaTeX, Jira, SharePoint
Languages: English (Fluent), Hindi (Fluent), Marathi (Fluent)

EDUCATION

University of Chicago Chicago, IL
Master of Public Policy, Data Analytics Specialization Expected June 2026

- Coursework: Machine Learning, Advanced Program Evaluation, Econometrics, Data Visualization, Corporate Finance, Advanced Decision Models, Timeseries Data and Forecasting, Application Development

St. Olaf College Northfield, MN
B.A. in Quantitative Economics, Political Science, and International Relations May 2022

- Davis Scholar: Scholarship awarded by Davis UWC Scholars Program for academic excellence and global engagement

PROFESSIONAL EXPERIENCE

World Bank Group, Development Impact Evaluation (DIME) Washington, DC (Remote)
Research Assistant (Internship) Mar 2026 – Present

- Analyzing RCT data from the World Food Programme's food security interventions across 4 countries using pooled regression models to estimate causal treatment effects
- Harmonize and validate multi-country panel datasets across inconsistent administrative coding schemas, performing systematic data cleaning and quality checks to ensure cross-country comparability

Cook County Assessor's Office (CCAO) Chicago, IL
Data Analyst (Internship) Jan 2026 – Mar 2026

- Built ETL pipelines in RSQLite and R to extract and clean large-scale property tax records from county databases, structuring raw administrative data for downstream quantitative analysis
- Developed interactive choropleth maps and time-series charts linking TIF district boundaries, revenue flows, and tax levy data, enabling pattern identification across annexation cycles

United Nations Development Program (UNDP) New York, NY (Remote)
Data Intern – Data, AI, and Innovation Hub (Internship) Aug 2025 – Dec 2025

- Performed landscape analysis of national digital infrastructure across 3 countries, synthesizing institutional data into structured assessments of technical capacity gaps and interoperability bottlenecks
- Conducted due diligence and quantitative risk assessment for public-private data partnerships, building evaluation frameworks to score institutional alignment and data-sharing risk
- Authored a data governance report for Uzbekistan's national digital transformation initiative, translating infrastructure diagnostics into policy-ready recommendations for cross-agency interoperability

Busara Center for Behavioral Economics Nairobi, Kenya
Research and Advisory Intern June 2025 – Aug 2025

- Designed survey instruments and sampling protocols for a randomized field experiment across 4 Kenyan counties, managing data collection workflows and enumerator quality control
- Estimated treatment effects using regression-based statistical models; applied mixed-methods analysis combining quantitative outputs with NVivo-coded qualitative data to validate findings

Acumen, LLC Washington, DC
Data Analyst – Statistical Programmer Oct 2022 – May 2024

- Wrote and optimized SAS and Stata programs to process 4.4M+ Medicare claims records quarterly, producing cost model outputs and statistical summaries for federal agency clients
- Maintained and validated statistical methodologies across 600+ procedure evaluations per quarter, performing systematic QA/QC checks on cost models and regression outputs before client delivery
- Constructed and stress-tested analytical pipelines for concurrent multi-workstream deliverables, identifying and resolving calculation errors and methodology inconsistencies under tight regulatory timelines
- Authored technical documentation standardizing reproducible analysis workflows, reducing rework and supporting methodology audits across teams

Gondan Diaries – Full-Stack Travel Journaling Application

Ruby on Rails, Supabase, Render, OpenAI API, Google Maps API

- *Links:* [Live App](#) | [GitHub](#)
- Built a full-stack social travel journaling application in Ruby on Rails, implementing relational data models for trips, days, activities, and user relationships; deployed on Render with Supabase as the production database
- Integrated OpenAI API to generate personalized AI-guided reflection prompts per journal entry and Google Maps API to render interactive trip maps and visualize location-based itineraries
- Developed social features including friend connections, post likes, comments, and a shared timeline feed, implementing authentication and authorization logic across user roles

Kenya Feed-in-Tariff – Quasi-Experimental Policy Evaluation

Python, R, Difference-in-Differences, Synthetic Control

- *Links:* [Portfolio](#)
- Estimated the causal effect of Kenya's feed-in-tariff energy policy using a difference-in-differences design comparing Kenya against Ghana as a control group, constructing parallel trends tests to validate identification assumptions
- Built a synthetic control model as an additional robustness check, constructing a weighted synthetic counterfactual for Kenya from donor pool countries to corroborate DiD estimates

Aravalli Hills – Geospatial Land Protection Analysis

Python, NumPy, Rasterio, GeoPandas, Shapely, SciPy, Matplotlib, Pathlib

- *Links:* [Portfolio Article](#) | [GitHub](#)
- Conducted raster and vector geospatial analysis of India's Aravalli Hills region, computing the share of land area that would remain unprotected under existing regulatory boundaries
- Published findings as an investigative article on portfolio website, translating spatial outputs and visualizations into accessible reporting on land protection coverage gaps

Global Protest Tracker – Interactive Data Visualization

Python, D3.js, JavaScript | Data: Carnegie Endowment for International Peace

- *Links:* [Portfolio](#) | [GitHub](#)
- Processed and analyzed Carnegie Endowment for International Peace global protest data in Python, cleaning and structuring event-level records for interactive visualization
- Built a fully interactive visualization in D3.js with dynamic filtering, choropleth mapping, and time-series event plots enabling user-driven exploration of global protest trends

Harvard ICH Policy Hackathon – Stochastic Financial Model

Finalist, Top 10 of 401 Global Entries

Boston, MA

Jan 2025 – Feb 2025

- *Links:* [Portfolio](#)
- Built a stochastic financial model simulating credit allocation strategies for 1.2M smallholder farmers in India, quantifying distributional outcomes under alternative lending scenarios
- Identified an 8% reallocation of priority sector lending as the optimal intervention to reduce agricultural debt-to-asset ratios; presented findings to Indian government officials

Parcel-Level Land Value Prediction Model

Research Assistant – Prof. Seth Binder, St. Olaf College Economics Department

Northfield, MN

June 2021 – Dec 2021

- *Links:* [PLOS ONE Publication](#)
- Built a parcel-level land cost prediction model integrating geospatial and economic data using propensity score matching and regression methods in R
- Contributing author: Gold, M., Binder, S., & Nolte, C. (2023). Expanding the coverage and accuracy of parcel-level land value estimates. *PLOS ONE*, 18(9), e0291182
